

Requirements

1. Shopfitter 4 installed on target computer
2. Dreamweaver or FrontPage (with DWT template capabilities)

Installation

1. Download the zip file from www.shopfitter.com/themes/sf4-dwt-template.zip
2. Unzip the archive and save the folder contained to C:\Program Files\Shopfitter\Shopfitter 4\themes

Configuration

1. Create your shop in Shopfitter 4 and add all your products and categories
2. Add an info page entitled "SF4-DWT-Template"
3. Open the "Theme" tab and select the DWT Template theme then publish the site
4. In Windows Explorer open C:\Program Files\Shopfitter\Shopfitter 4\Shops\Your Shop" and find the "web" folder
5. You can work directly with this or copy to another location, your usual place for saving web projects
6. Open the "web" folder and open the file "SF4-DWT-Template.htm" in Notepad or other editor (not Dreamweaver or FrontPage)
7. Delete "`<!-- InstanceBegin template="/Templates/SF4-DWT-Template.dwt" codeOutsideHTMLIsLocked="false" -->`" on line 2 and "`<!-- InstanceEnd -->`" on line 131
8. Next carry out a find and replace (usually accessed from the 'Edit' menu)
9. Use Find and Replace to find 'Instance' and replace with 'Template'
- The following changes should have been made (these can be done manually by editing the code):
 - Line 4 change "`<!-- InstanceBeginEditable name="doctitle" -->`" to "`<!-- TemplateBeginEditable name="doctitle" -->`"
 - Line 6 change "`<!-- InstanceEndEditable -->`" to "`<!-- TemplateEndEditable -->`"
 - Line 7 change "`<!-- InstanceBeginEditable name="sf4-head" -->`" to "`<!-- TemplateBeginEditable name="sf4-head" -->`"
 - Line 14 change "`<!-- InstanceEndEditable -->`" to "`<!-- TemplateEndEditable -->`"
 - Line 106 change "`<!-- InstanceBeginEditable name="EditRegion1" -->`" to "`<!-- TemplateBeginEditable name="EditRegion1 -->`"
 - Line 113 change "`<!-- InstanceEndEditable -->`" to "`<!-- TemplateEndEditable -->`"
11. Save the changes
12. Now define your site in Dreamweaver (or FrontPage) using the "web" folder as the root directory

13. Open the SF4-DWT-Template.htm file in Dreamweaver
14. Select "Save as Template" from the 'File' menu and then
15. Two pop ups will appear, click "Save" on the first and then "Yes" on the 'Update Links' pop up

Dreamweaver will create a Templates folder and a new DWT template called "SF4-DWT-Template.dwt" will be available for editing the site

When you make the first save after altering the template an error message may occur for a file called "categorylist.htm", this is not part of the web shop so can just be OK'd - you can delete this file so that the error doesn't recur.
